CENG 111 – Computer Programming I

Labwork 8

Q1.

Write a program to ask the user enter a even number until the user enters an even number (Note: use do-while).
It will output number of attempts user made once the even value is inputted.
Sample Run:
```
Enter an even integer: 3
Enter an even integer: 9
Enter an even integer: 4
3 attempts made!
```

Q2.

Write a C program that calculates the sum of odd divisors of an inputted integer number.

Q3.

Write a C program that inputs 2 positive integers a and b. Calculate a^b without using pow function.
